

## Discus fish (Symphysodon)

Discus fish, scientifically known as Symphysodon, are a genus of cichlids native to the Amazon River basin in South America. They are highly prized in the aquarium trade for their vibrant colors, unique shape, and social behavior. Here's a detailed description:

### Physical Characteristics:

1. **\*Shape\***: Discus fish have a laterally compressed, disc-shaped body, which gives them their name.
2. **\*Size\***: They can grow up to 8-10 inches (20-25 cm) in diameter when fully mature.
3. **\*Coloration\***: They exhibit a wide range of colors and patterns, including shades of blue, green, red, brown, and yellow. Wild types often have vertical stripes, while captive-bred varieties may have more intricate patterns.
4. **\*Fins\***: They have long dorsal and anal fins that complement their round shape.

### Behavior:

1. **\*Social Nature\***: Discus fish are social and prefer to live in groups. They are generally peaceful but can be territorial during breeding.
2. **\*Intelligence\***: They are known for their intelligence and can recognize their owners.
3. **\*Sensitivity\***: Discus are sensitive to water conditions and stress, requiring stable environments.

### Habitat:

1. **\*Natural Habitat\***: They inhabit slow-moving, warm, and acidic waters in the Amazon River basin, often among submerged tree roots and vegetation.
2. **\*Aquarium Requirements\***: They need large tanks (at least 50 gallons for a small group), warm water (82-88°F or 28-31°C), and soft, slightly acidic water (pH 6.0-7.0). Regular water changes are essential.

### Diet:

1. **\*Omnivorous\***: In the wild, they feed on small invertebrates, algae, and detritus.
2. **\*Captive Diet\***: In aquariums, they thrive on high-protein foods like bloodworms, brine shrimp, and specialized discus pellets. A varied diet is crucial for their health and coloration.

### Challenges:

1. **\*Care Level\***: They are considered intermediate to advanced-level aquarium fish due to their sensitivity to water quality and diet.
2. **\*Disease Susceptibility\***: They are prone to stress-related diseases like ich and bacterial infections if conditions are not optimal.

Discus fish are a stunning and rewarding species for experienced aquarists who can meet their specific care requirements.
